

AI Readiness Assessment

A practical self-assessment for leaders deciding where AI fits in their organization — and where it doesn't yet.

How to use this

Fifteen statements across five dimensions of readiness. Score each one honestly, total your points, and read your band on page 2. The lowest-scoring dimension is where to focus first.

0 No / not yet

1 Partly / in progress

2 Yes / in place

1 Strategy & Use Cases

We've identified specific, high-value tasks where AI could help — not just “we should use AI.”

Each target use case has a clear owner and a way to measure success.

We know which use cases are quick wins and which are longer-term bets, and where to start.

Subtotal

2 Data & Infrastructure

The data our AI use cases need is accessible and reasonably organized, not locked in silos.

Our systems can integrate with AI tools and APIs without major re-engineering.

We know what data is sensitive and where it lives.

Subtotal

3 People & Skills

Our team has the baseline skills, or a plan to build them, to use AI tools effectively.

Staff are willing to adopt AI in their daily work, rather than resistant or fearful.

At least one person internally can champion and support AI adoption.

Subtotal

4 Governance & Trust

We have, or are drafting, a basic AI use policy covering data handling, privacy, and acceptable use.

We understand our obligations around customer and employee data when AI is involved.

We review AI outputs before relying on them for important decisions.

Subtotal

5 Tooling & Adoption

We've chosen or shortlisted specific tools rather than experimenting ad hoc everywhere.

We have a way to roll out tools and actually drive usage, not just buy licenses.

We can measure whether AI is delivering value — time saved, quality, or cost.

Total score

out of 30 possible points

What your score means

0–10

Exploring

AI is mostly aspiration right now. Start with strategy and foundations before investing in tools — pick two or three concrete, low-risk use cases with clear owners.

11–20

Building

You have real pockets of readiness, but gaps will limit how far AI scales. Close your lowest-scoring dimension(s) below before expanding.

21–30

Ready to Scale

Strong foundation. Shift focus from readiness to execution: ship, measure, and expand what works.

Where to focus first

Your lowest-scoring dimension is your starting point. Use this guide:

Strategy & Use Cases

Run use-case discovery before buying anything. Tools without a target become shelfware.

Data & Infrastructure

Audit data access and integration points first — AI is only as good as the data it can reach.

People & Skills

Invest in role-specific enablement. Adoption, not the tool, is where most AI initiatives stall.

Governance & Trust

Put a lightweight AI use policy in place before broad rollout — it prevents the expensive mistakes.

Tooling & Adoption

Standardize on a small set of tools and measure usage, rather than letting “shadow AI” spread unmanaged.

Turn this into a roadmap.

Barefoot Digital's AI Readiness Audit takes this assessment deeper — mapping your specific gaps to a concrete, prioritized action plan for your organization.
